EnduraRock™ Roofing System

An EnduraRock™ Roofing System can solve your leaking, flat roof problems and save you thousands of dollars a year in maintenance and energy costs. This proven roofing system incorporates high compressive strength, seamless spray-in-place rigid polyurethane foam with a thick layer of protective gravel. Your investment in a low cost, trouble-free EnduraRock™ roof will return your dividends in savings and comfort for years to come.

Seamless And Self-Adhering

Because our advanced polyurethane spray foam is self-flashing and sprayed in place, there are no seams, channels, complex flashings or overlapping edges for water to seep through.

Rugged Compressive Strength

Rigid polyurethane exhibits superior high compressive strength and, when combined with the protective gravel layer, provides excellent resistance to inclement weather and mechanical damage.

Weather Resistant

The unique combination of foam and gravel provides the best possible protection from the elements. EnduraRock™ Roofing System evenly disperses precipitation and ice in the winter and enhances evaporation in the summer.

Energy Efficient

Spray polyurethane foam is specially formulated with closed cells, which makes it one of the best insulating materials on the market today. This translates into drastically reduced energy costs for you. Our spray polyurethane foam is so efficient, it has been used by NASA to insulate the external fuel tanks on the space shuttles.

Improved Drainage

Because the spray polyurethane foam is sprayed in place, it can be tapered to improve water drainage on an existing roof. This eliminates the detrimental effects of standing water.

UL Approved

EnduraRock™ passes the class A fire test in accordance with Underwriters Laboratories test standard UL 790.

Breathable

While the closed cell structure of spray polyurethane foam is impervious to liquid water, water vapor can diffuse through the foam.

The Unmatched EnduraRock™ Process

The EnduraRock™ System offers premium, top quality components that have demonstrated exceptional, extended performance.

EnduraRock™
Premier Roofing System

Every roofing project is different, so we customize our roofing systems to meet and exceed your specifications and expectations. With on-site specially trained, qualified Tier One Applicators, you can be assured every step in the process will be performed with excellent proficiency delivering an unmatched, premier roofing system.

EnduraRock™ provides flexible, long lasting protection even in the most adverse conditions for flat roofs. This comprehensive roofing system provides a superior roof for new construction as well as existing structures, as the application process addresses each weakness in the existing roof and is ideal for any application over prefabricated metal roof panels. The EnduraRock™ process involves four distinct steps:

Prepare Surface – All surfaces are cleaned and debris is removed including loose dirt, chalking and rust. Primers may be required depending on the condition of the roof.

Apply Foam – With a seamless, water-tight application, advanced closed cell spray polyurethane foam is applied. This layer keeps the elements from your roof while providing a flexible fit able to expand and contract with variable temperatures and weather conditions.

Apply Acrylic Coating – An extremely flexible elastomeric coating is applied around detail areas, vertical surfaces and penetrations.

Apply Gravel – Finally, gravel is applied to completely cover the flat areas of the roof to achieve a thickness of ¾ to 1 inch protects the roofing system from adverse weather and evenly disperses precipitation.

Once installed, the EnduraRock™ Premier Roofing System is a seamless, energy efficient, economical and weather resistant solution for years to come.
